JUNE

June is the sixth month in the Julian and Gregorian calendars. June comes from the Latin word Junius, of June (Juno) referring the Roman Goddess. The zodiac signs in astrology for June are Gemini and Cancer. Roses and Honeysuckle as the birth flowers for June. June marks the longest and shortest days of the year. 21st June marks the longest day of the year in the Northern Hemisphere and the shortest day in the Southern Hemisphere.

JULY

July was named by Roman Senate in honour of Roman General Julius Caesar in 44 B.C being the month of his birth. Before then it was called Quintilis, being the fifth month of the calendar that started with March. As the second month of Summer, July is, on average, the warmest month of the year in the Northern Hemisphere. In the Southern Hemisphere, though, July is on average, the coldest month of the year, being the second month of Winter. There are two star signs which fall in the month of July – Cancer and Leo. July has two birth flowers – Water Lily and Larkspur.

AUGUST

The word August is derived from the Latin word ‘Augustus’ meaning ‘augur’. The month is named after the Roman Emperor Augustus, who was known as ‘Augustus’. August is the seventh month of the year. The colourful flowers known as the Gladiola and Poppies are the two official flowers for August. There are two astrological signs for August – Leo and Virgo.

SEPTEMBER

The origin is from the Latin word Septem, which means Seven. It is because, in the Roman Calendar, September was the seventh month of the year. The only month in the year that is not named after a Roman Deity is September. The most fascinating fact about September is that it is the only month with the same letters in its name as the number of the month (9). September has nine letters and is the 9th month of the year. We observe the autumnal equinox on 22nd September. It is when the sun is directly above the equator, and days and nights are equal in length. The birth flowers of September are Aster and Morning glory. There are two star signs which fall in the month of September – Virgo and Libra.

OCTOBER

The meaning of October comes from the Latin word 'octo' meaning eight. The old Roman Calendar started in March. So October was the eighth month. When the Roman Senate changed the calendar in 153 BC, the New Year started in January and October became the tenth month. October is seen by many, to be a time of real seasonal change, both in the Northern Hemisphere and Southern Hemisphere.

In the North, autumn is really in the peak and nights are getting cooler. The harvest festivals are over, and the nights are getting longer and longer by the day. October has two strikingly different birth flowers, the pastel – hued Cosmos and the radiant Marigold flowers. There are two star signs which fall in the month of October – Libra and Scorpio.

NOVEMBER

November is the eleventh and penultimate month in the Julian and Gregorian Calendars and has 30 days. The Latin word for November is 'novem', meaning nine. November is the month of spring in the Southern Hemisphere and late autumn in the Northern Hemisphere. The name of November has remained unchanged since the ancient Roman calendar. The first Roman calendar has only ten months, with November being the ninth. After the introduction of January and February, November jumped to eleventh position.

The Anglo-Saxons had a different name for November. It is the time of the year (in the Northern Hemisphere) when cold winds start to chill you to the bone, and that's why they called it Wind Monath or Wind Month. They also called November Blod Monath or Blood Month. The official flower for November is the Chrysanthemum.

The people of Mexico celebrate Dia de los Muertos, The Day of the Dead on 1st November. They believe that the souls of the deceased loved ones return on this day. There are two zodiac signs for November – Scorpio and Sagittarius.

DECEMBER

December is the 12th month in our modern-day Gregorian calendar. However, it was originally the 10th month of the Roman calendar (until 153 BC). Hence, “December” comes from the Latin word ‘decem’, meaning “ten.” Back in Roman times, the calendar only had ten months and began with March! The winter period was not even assigned months because it was not an active time for military, agriculture, or civil life. December changeable and mild; the entire winter will stay gentle. The month of December brings the winter solstice in the Northern Hemisphere. This is the shortest day of the year. There are two star signs which fall in the month of December – Sagittarius and Capricorn. The birth flowers are the Holly and Narcissus.

JANUARY

The month of January is symbolized by the two-faced God Janus, keeping with the concept of past and present, endings and beginnings. In the northern hemisphere, January is the coldest month but in southern hemisphere it is the hottest month. There are two star signs which fall in the month of January – Capricorn and Aquarius. January’s primary birth flower is the Carnation and the secondary flower is the Snowdrop.

FEBRUARY

The name of February comes from the Latin word “februum”, which means purification. February fluctuates between having 28 and 29 days per year. The 29th day only occurs every 4 years during leap years. The odds of being born on February 29th are about 1 in 1,461. Those born on a leap day can be called a “leaper” or “leapling.” The length of February was finalized when Julius Caesar remade the Roman calendar and assigned the month 28 days and 29 days. In 713 B.C., February was officially added to the Roman calendar. In the Northern Hemisphere, February is the third month of winter. Meanwhile, in the Southern Hemisphere, February is the last month of summer. Between the North and South Hemispheres, February is the equivalent of August. There are two zodiac signs in February - Aquarius and Pisces. The birth flowers for February are Violets and Primroses.
